**TOWARDS EPIDEMIC PREDICTION:  
FEDERAL EFFORTS AND OPPORTUNITIES  
IN OUTBREAK MODELING**

PRODUCT OF THE  
**Pandemic Prediction and Forecasting  
Science and Technology Working Group**

"A CDC model [...] was key to increasing the speed and scale of the US and global response.

Frieden, 2015

Key findings:

1. "cases were increasing exponentially, and the response needed was massive and urgent"
2. "the model predicted a severe penalty for delay"
3. "the model identified a tipping point at which the epidemic would [...] decline if enough Ebola patients were isolated effectively and decedents buried safely"
4. "the model predicted that when the tipping point was reached, transmission would decline rapidly"

## Uses of real-time forecasts in outbreaks

- Plan the scale of a response or intervention
- Allocate resources (e.g., geographically)
- Plan clinical trials

Challenges/opportunities

# 1. Evaluation of probabilistic forecasts

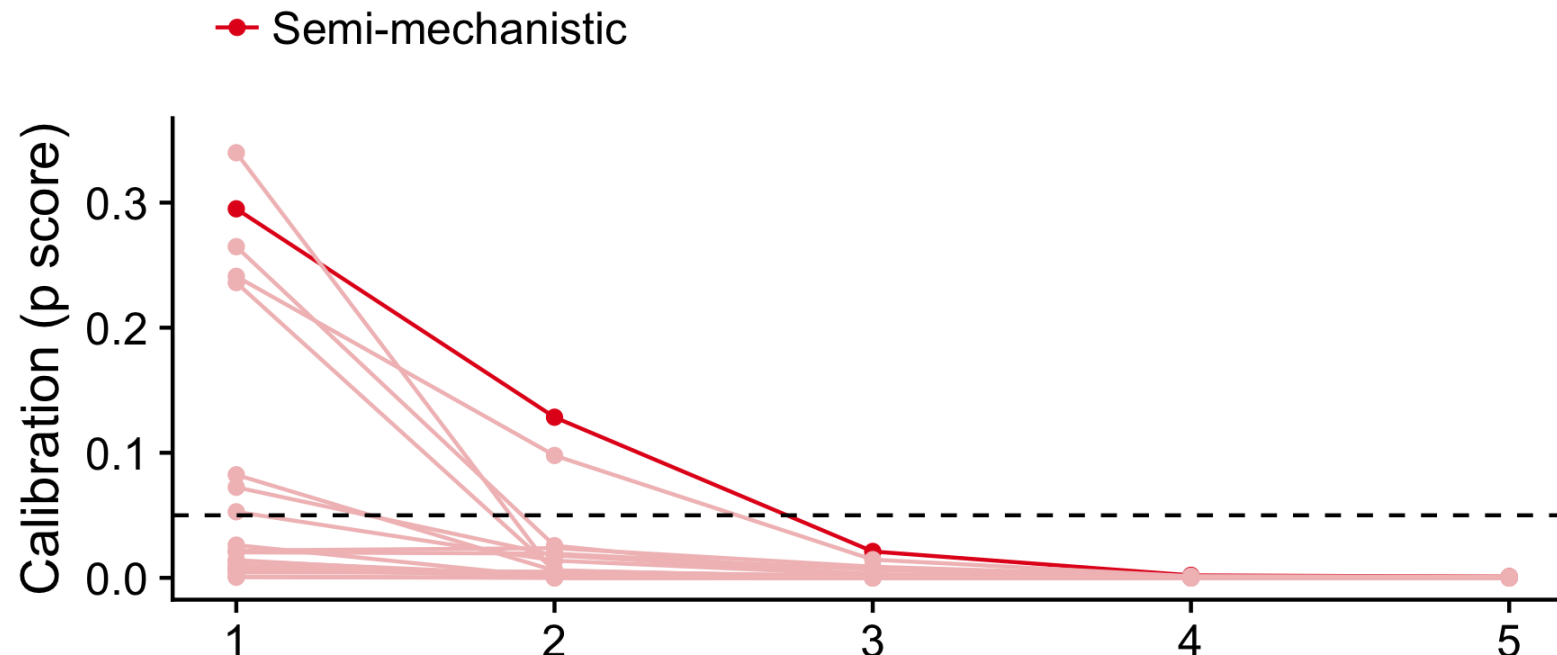

## 1-week forecasts

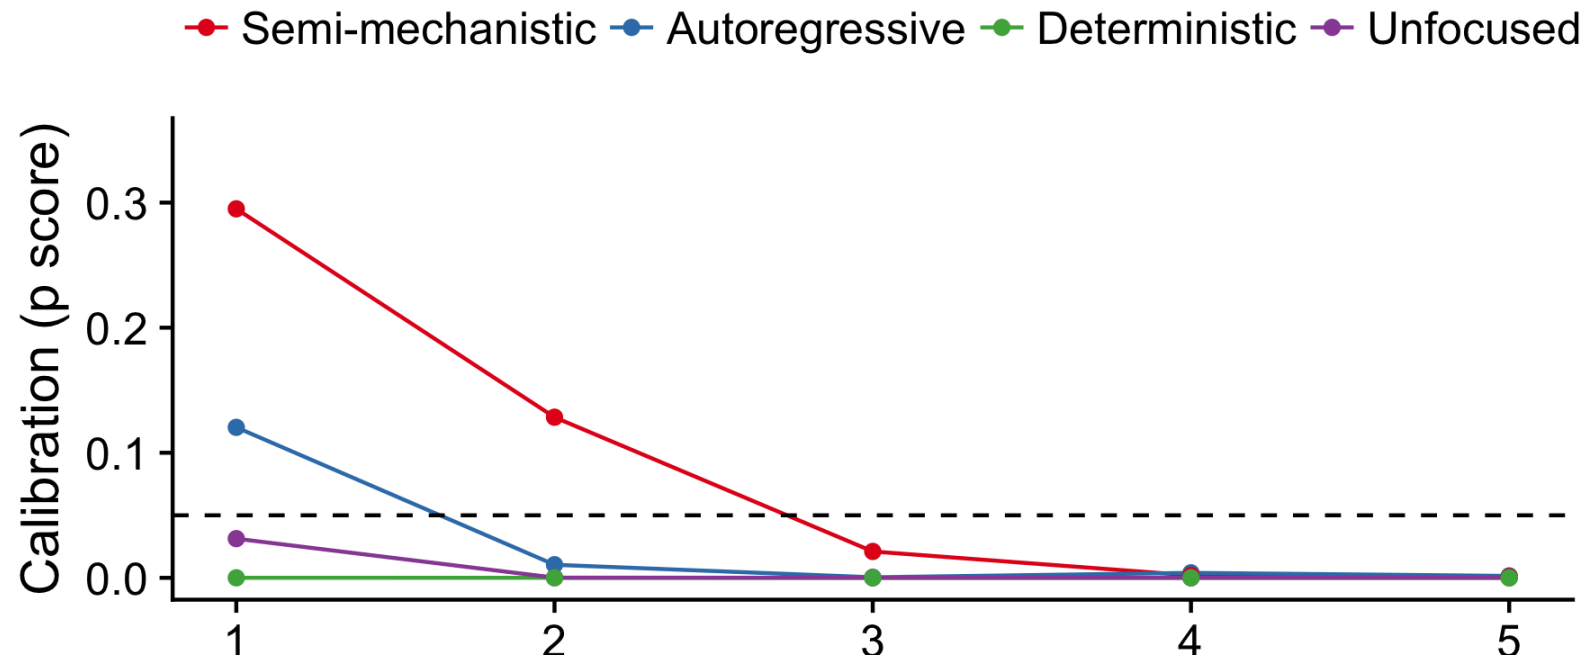

## Calibration: Compatibility of forecasts and observations.

## Calibration: Compatibility of forecasts and observations.

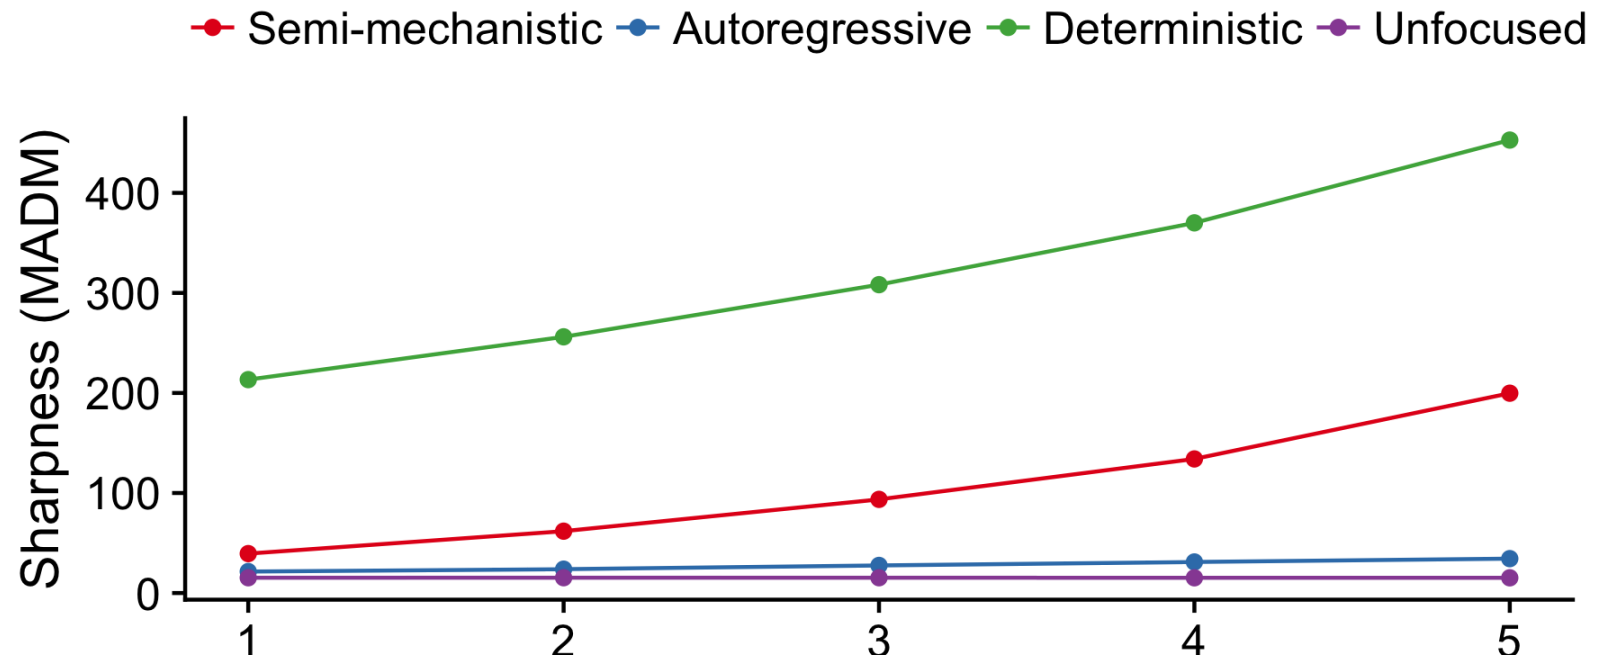

## Calibration: Compatibility of forecasts and observations.

# Sharpness

## 2. Integration of different data sources

Improve forecasts by  
all available **data streams**  
(individual/behavioural/spatial/genetic)?

[FAQ](#)

LibBi is used for state-space modelling and Bayesian inference on high-performance computer hardware, including multi-core CPUs, many-core GPUs (graphics processing units) and distributed-memory clusters.

The staple methods of LibBi are based on sequential Monte Carlo (SMC), also known as particle filtering. These methods include particle Markov chain Monte Carlo (PMCMC) and SMC<sup>2</sup>. Other methods include the extended Kalman filter and some parameter optimisation routines.

LibBi consists of a C++ template library, as well as a parser and compiler, written in Perl, for its own modelling language.

## Summary

- Real-time forecasts can aid decision making
- Meaningful forecasts are probabilistic
- Forecasts must be evaluated to establish reliability and limitations
- Some big challenges remain
